How to add custom font file to your React App?

#react #javascript #webdev #css

Before everything gets started, go ahead and run the following code in your terminal.

`npx create-react-app [app-name]`

Adding Google fonts

If you like to use google fonts (api) instead of local fonts, you can add it like this.

Example:

```
@import url('https://fonts.googleapis.com/css2?family=Rajdhani:w
```

Similarly, we can also add it inside the `index.html` file using `link` tag.

```
<link href="https://fonts.googleapis.com/css2?family=Rajdhani:wg
```

Business model

Starter

Best option for personal use and for your next side projects.

Free

- ✓ No setup, monthly, or hidden fees
- ✓ Team size: **1 developer**
- ✓ Article limit: **10/month**

Get started

Pro

For avid readers and professional developers.

$6 /month

- ✓ Team size: **10 developers**
- ✓ No ads
- ✓ Unlimited monthly articles

Get started

Revenue sharing

Writers earn a share of our advertising revenue

Easy Import

Accelerated content growth via writers importing articles from other platforms in one click

Rapid User Growth

Leveraging existing bloggers' communities + weekly newsletter with new articles

About me

4+ years

Shipping web software and reading/writing technical blogs

Seeking beta users, technical writers, and anyone passionate about the developer experience
